Art Unit: 3731

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to a guided punch, classified in class 606, subclass 184.
- II. Claims 4-6 and 17-22, drawn to an anastomotic connector, classified in class 606, subclass 153.
- III. Claims 7-10, drawn to a graft delivery system, classified in class 606, subclass 108.
- IV. Claims 11-16, drawn to a method of sealing an opening between two blood conduit lips, classified in class 128, subclass 898.
- V. Claims 23-28, drawn to a delivery system for an anastomotic connector, classified in class 606, subclass 108.
- VI. Claims 29 and 30, drawn to a method of forming an aperture in a blood vessel, classified in class 128, subclass 898.
- VII. Claims 31-33, drawn to a method of guiding hooks of an anastomotic connector into an aperture of a blood vessel, classified in class 128, subclass 898.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as being used without the anastomotic connector of invention II or the graft delivery system of invention III, for example. See MPEP § 806.05(d).

Inventions (I-III, V) and (IV, VI, VII) are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process. For example, the anastomotic connector of invention II could be used without using a clip as defined in invention IV.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be

Art Unit: 3731

examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Thaler whose telephone number is (703) 308-2981. The examiner can normally be reached Monday to Friday.
